WATER METER TROUBLE SPOT *Check List*

Date: _____

Acct No: _____

Name: _____

Address: _____

Dear Customer,

Your meter has been re-read and your meter is turning.

Your water usage has increased, and you may possibly have a leak somewhere in your water system.

There may be a leak, either in your house or in the service line leading from the meter to your house. Since any leak that occurs on the house side of the meter is your responsibility; you may want to call upon the services of your plumber.

Please refer to the trouble check list on the reverse side.

1. Water softener equipment.
2. Water tank on commode:
 - (a) Seeping feed valve causing overflow.
 - (b) Ball or flap valve not seating.
3. Water heater filling or leaking.
4. Dripping faucets in tub, sink, shower, lavatory, etc.
5. Outside hydrant or faucet open, leaking or dripping.
6. Hose in yard turned on or leaking.
7. Relief valve on water heater open or seeping.
8. Washer or dishwasher feed valve open or seeping.
9. Leaking pipes or fittings in house or in line between the meter and house.
10. Unknown lines in yard or to other outlets.
11. Swimming pool, fishpond, fountain, etc.
12. Water to air conditioning cooling tower running or leaking.
13. Any equipment connected to water lines
14. Service lines to out buildings leaking.
15. Water feed to heating boiler on humidifier
